

Check fitted flocker model

Specify model to check:

```
spec <- params$spec #final_species_eco_sorted[6] # 1
spec
```

```
[1] "American Kestrel"
```

```
buffer_km <- params$buffer_km
buffer_km
```

```
[1] 750
```

```
fold <- params$fold
# fold

results_dir <- params$results_dir
results_dir
```

```
[1] "M:/Documents/DEBTs/analysis/Schifferle_BBS_occupancy_models_2023/results/full_model"
```

Load fitted model:

```
load(file = file.path(results_dir,
                       paste0("out_", spec, "_fm_buffer", buffer_km, ".RData"))) # xx adjust
#print(out)

posterior <- brms::as_draws(out)
```

Check whether MCMC worked:

Do we have divergent transitions?

```
[1] "divergent transitions: 0"
```

Explorations regarding divergent transitions:

...

Is effective number of MCMC samples large enough:

The larger the ratio of n_{eff} to N (number of samples), the better.

```
[1] "effective sample size too small"
```

```
[1] "n_eff ratio bulk ESS:"
```

Min.	1st Qu.	Median	Mean	3rd Qu.	Max.
0.2119	0.7267	0.9403	0.9172	1.0502	2.1465

```
[1] "n_eff ratio tail ESS:"
```

	Min.	1st Qu.	Median	Mean	3rd Qu.	Max.
	0.08699	0.68218	0.73281	0.72794	0.81674	0.90623

```
[1] "effective sample size in bulk or tail too small"
```

Do chains mix well:

No divergences to plot.

No divergences to plot.

No divergences to plot.

Post-warmup iteration

Are R-hat values fine:

Min.	1st Qu.	Median	Mean	3rd Qu.	Max.
0.9991	0.9996	0.9998	1.0002	1.0005	1.0089

```
[1] "All R-hat values < 1.01"
```

Print model posteriors

```
[1] "parameters for which uncertainty interval doesn't overlap zero:"
```

```
[1] "b_occ_bio1_3yrs" "b_occ_pr_spring_3yrs"
```

```
[3] "b_occ_pr_autumn_3yrs" "b_occ_Ibio3_3yrsE2"
```

```
[5] "b_occ_sum_annual_crops_3yrs" "b_occ_Isum_annual_crops_3yrsE2"
```

```
[1] "b_colo_Intercept" "b_colo_bio1" "b_colo_bio2" "b_colo_bio7"
```

```
[5] "b_colo_Ibio1E2" "b_colo_Ibio7E2" "b_colo_secdf" "b_colo_pastr"
```

```
[9] "b_colo_IpastrE2"
```

```
[1] "b_ex_pr_spring" "b_ex_pr_autumn"
```

```
[3] "b_ex_Ipr_summerE2" "b_ex_sum_annual_crops"
```

```
[5] "b_ex_secdf" "b_ex_urban"
```

```
[7] "b_ex_Isum_annual_cropsE2" "b_ex_IsecdfE2"
```

```
[9] "b_ex_IurbanE2"
```
